

2024 Bottom Temperature Anomaly

NOAA Fisheries Eastern Bering Sea Bottom Trawl Survey 1982–2023 (41 years)

The 2024 near real-time ocean bottom temperature anomaly in the NOAA Fisheries AFSC Groundfish Assessment Program's eastern Bering Sea bottom trawl survey. The time series mean bottom temperatures from the eastern Bering Sea (1982-2023; 41 years) bottom trawl survey is compared to the 2024 survey (June 2-June 7). The final, validated haul and catch data will be publicly accessible on Fisheries One Stop Shop data platform (<https://www.fisheries.noaa.gov/foss>) after the survey is complete.
